AUGMINTECH

PG Program in MEP Design and Drafting

for Mechanical Engineers, Electrical Engineers and Civil Engineers

Master the most in-demand skill in AEC industry and start a lucrative career

Program Highlights

LIVE Classes for 6 months

Access to recordings for 1000 days

12 MEP Software

Access to Class Notes for 1000 days

500+ Interview Practice Questions

100+ Files to download (handbooks, databooks, catalogs, project files, charts, tables, monographs etc.)

5 Excel Templates for MEP Calculations

Internship and Job Assistance

Certificate of Completion (Autodesk | ISO | IAF | EGAC | MSME accredited)

About Augmintech

Turning ambitions into high-paying BIM careers since 2021

At **Augmintech**, we are committed to providing world-class training and certification in the AEC industry.

Our credibility and expertise are backed by globally recognized accreditations and partnerships.

AUTODESK Learning Partner

CERTIFIED ISO 9001:2015 COMPANY

INTERNATIONAL ACCREDITATION FORUM IAF

EGAC Accredited Inspection CAB # 032413

15000+	50+	4.9/5	50+
Professionals Trained	Countries Students	Average Rating	Placement Partners

At Augmintech, **we don't just train—we transform careers**. With globally recognized certifications, real-world projects, and expert mentorship, we ensure you are industry-ready for high-paying BIM roles.

The AEC industry is evolving fast, and skilled professionals are in demand worldwide. Whether you're a student, a working professional, or a career shifter, this is your opportunity to step ahead.

Join Augmintech and take charge of your future—let's build your success together!

How You'll learn

The PG Program is a combination of live sessions and recordings of live classes will be available to access later. You can post your doubts 24*7 or discuss them in live sessions

LIVE SESSIONS

6-8 hours weekly Live Class

RECORDED VIDEOS

Class recordings of live classes are accessible anytime, anywhere for 1000 days from the date of enrollment

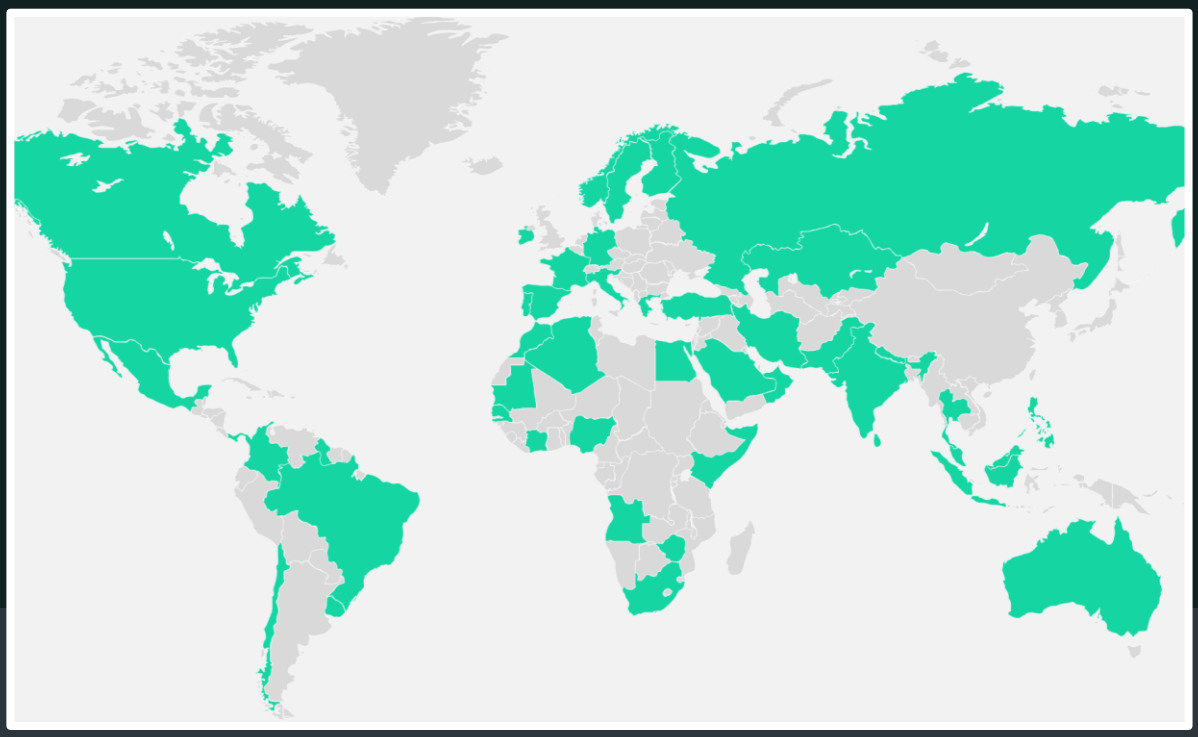

DOUBTS DISCUSSION

Post your unlimited queries 24*7 in the discussion forum below any video lecture

Click here to chat with us

For whom is the **Course for**

Learners from **50+ countries** are upskilling from Augmintech

The course is designed to cover basic to advanced level concepts used in daily life of an MEP professional

You can completely understand everything taught in the course even if you are a fresher

The course is well suited for aspirants in

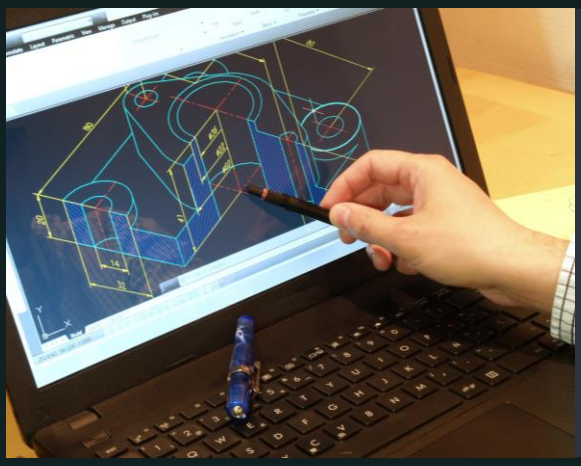

- Mechanical Engineering
- Electrical Engineering
- Civil Engineering

NOTE: The course is for working professionals or students in their final year of graduation

Click here to chat with us

Courses in

PG Program in MEP

AutoCAD Drafting

8 hours

Complete understanding of 2D drafting with all the drawing and modification tools necessary for MEP drafting

1 week

HVAC Design

56 hours

Detailed designing of HVAC systems and components with in-depth understanding of all machines and HVAC systems

7 weeks

Plumbing Design

24 hours

Detailed designing of plumbing systems and components with in-depth understanding of all machines and plumbing systems

3 weeks

Click here to chat with us

Courses in

PG Program in MEP

Fire Fighting Design

40 hours

Detailed designing of fire fighting systems and components with in-depth understanding of all machines and fire systems

5 weeks

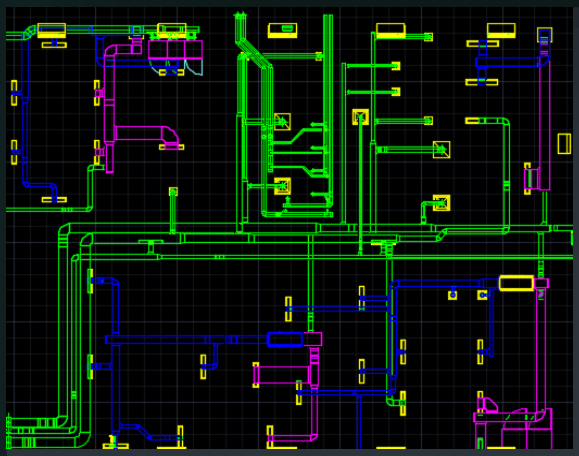

Electrical Design

24 hours

Detailed designing of electrical systems and components with in-depth understanding of all machines and electrical systems

3 weeks

MEP Drafting

48 hours

Understand complete drafting of MEP systems in AutoCAD by working on real life projects

6 weeks

AutoCAD Drafting Syllabus

- Getting Started
  - Introduction
  - Starting a new file
  - User Interface
  - Setting up drawing units & limits
  - Coordinate System
- Drawing Tools
  - Line
  - Circle
  - Arc
  - Rectangle
  - Polygon
  - Ellipse
  - Points
  - Hatches & gradients
- Modify Tools
  - Select
  - Copy
  - Move
  - Scale, Stretch, Offset
  - Mirror
  - Trim and Extend
  - Fillets and Chamfers
  - Erase, explode, align
  - Break, join
  - Array
  - Measure
  - Region, boundary
- Using Status Bar
- Working with layers
- Annotations
- Leaders and Tables
- Views and View Ports
- Block and attributes
- Creating isometric drawings
- Understanding Page setups
- Layouts, plotting and plot styles
- Referencing external files
- Adding title blocks
- Working with sheets

Click here to chat with us

HVAC Design Syllabus

Basics Concepts in HVAC
- Introduction to HVAC Principles
- Fundamentals of Heat Transfer
- Components of HVAC Systems
- Types of HVAC Systems

Psychrometry
- Definition and Importance of Psychrometrics
- Psychrometric Properties and Parameters
- Psychrometric Chart Interpretation
- Applications of Psychrometry in HVAC

Refrigerants
- Types of Refrigerants (CFCs, HCFCs, HFCs, etc.)
- Refrigerant Properties and Characteristics
- Environmental Impact and Regulations
- Refrigerant Selection Criteria

Air Conditioning
- Principles of Air Conditioning
- Types of Air Conditioning Systems (Split, Window, Central, etc.)
- Components of Air Conditioning Systems
- Energy Efficiency Considerations

Fan
- Types of Fans (Centrifugal, Axial, etc.)
- Fan Characteristics and Performance
- Fan Laws and Efficiency
- Fan Selection Criteria

Pumps
- Types of Pumps (Centrifugal, Reciprocating, etc.)
- Pump Performance Parameters
- Pump Selection Criteria
- Pump Sizing and Efficiency Considerations

Heat Load Calculation Thumb Rule
- Overview of Heat Load Calculation
- Thumb Rules for Quick Estimation
- Limitations and Accuracy of Thumb Rules

Heat Load Calculation by O-General Method
- Introduction to O-General Method
- Steps for Heat Load Calculation using O-General Method
- Assumptions and Limitations
- Example Calculation

Heat Load Calculation Manually
- Manual Heat Load Calculation Process
- Calculation Formulas and Equations
- Importance of Manual Calculation
- Verification and Validation Techniques

Heat Load Calculation by Excel Sheet
- Excel Spreadsheet Templates for Heat Load Calculation
- Input Parameters and Formulas
- Benefits and Limitations
- Customization and Automation Features

Heat Load Calculation by HAP Software
- Introduction to Hourly Analysis Program (HAP)
- Software Features and Capabilities
- Input Data Requirements
- Output Analysis and Reports

Winter Load Calculation (Heating)
- Methods for Calculating Heating Load in Winter Conditions
- Factors Affecting Winter Heat Load
- Heating System Design Considerations
- Energy Efficiency Strategies for Heating

Air Distribution System
- Types of Air Distribution Systems (Constant Air Volume, Variable Air Volume, etc.)
- Airflow Patterns and Distribution Methods
- Ductwork Design Principles
- Balancing and Testing Procedures

Plenum Box
- Definition and Purpose of Plenum Box
- Types of Plenum Boxes
- Design Considerations and Sizing
- Installation and Maintenance Guidelines

Air Terminal Devices
- Types of Air Terminal Devices (Diffusers, Grilles, Registers, etc.)
- Functionality and Applications
- Selection Criteria for Air Terminal Devices
- Integration with HVAC Systems

Duct Designing Methods
- Principles of Duct Design
- Duct Sizing Methods (Equal Friction, Static Regain, etc.)
- Duct Layout and Routing Considerations
- Insulation and Sealing Requirements

Click here to chat with us

HVAC Design Syllabus

Car Parking Ventilation
- Ventilation Requirements for Parking Areas
- Exhaust System Design Considerations
- Air Quality and Safety Measures
- Compliance with Building Codes

Toilet Ventilation System
- Importance of Ventilation in Toilets
- Toilet Exhaust Fan Sizing
- Odor Control Methods
- Compliance with Health and Safety Standards

Kitchen Ventilation System
- Ventilation Requirements for Commercial Kitchens
- Kitchen Exhaust Hood Types
- Grease Filtration and Fire Safety Measures
- Make-up Air System Design Considerations

Stairwell Pressurization System
- Purpose and Benefits of Stairwell Pressurization
- Design Principles and Criteria
- Equipment Selection and Layout
- Emergency Operation and Maintenance

Transformer and Diesel Generator Room Ventilation System
- Ventilation Requirements for Equipment Rooms
- Ventilation System Design Considerations
- Fire Safety Measures
- Equipment Selection and Installation Guidelines

Chilled Water System
- Components of Chilled Water System
- Chiller Types and Selection
- Chilled Water Distribution System Design
- Maintenance and Efficiency Considerations

Pump Head Calculation and Pump Selection
- Pump Head Calculation Methods
- Pump Curve Analysis
- Pump Selection Criteria
- Pump Efficiency and Performance Considerations

CAV and VAV
- Constant Air Volume (CAV) Systems
- Variable Air Volume (VAV) Systems
- Benefits and Drawbacks
- System Selection and Control Strategies

Cooling Tower
- Types of Cooling Towers
- Cooling Tower Components and Operation
- Cooling Tower Sizing and Selection
- Water Treatment and Maintenance Guidelines
- Valves and Coil Selection
- Types of HVAC Valves (Control Valves, Shut-off Valves, etc.)
- Coil Types and Applications (Heating Coils, Cooling Coils, etc.)
- Selection Criteria for Valves and Coils
- Integration with HVAC Systems

Valves and Coil Selection
- Types of HVAC Valves (Control Valves, Shut-off Valves, etc.)
- Coil Types and Applications (Heating Coils, Cooling Coils, etc.)
- Selection Criteria for Valves and Coils
- Integration with HVAC Systems

VRV or VRF
- Variable Refrigerant Volume (VRV) / Variable Refrigerant Flow (VRF) Systems
- System Components and Operation
- Benefits and Applications
- Design Considerations and Installation Guidelines

Desert Cooler Selection
- Evaporative Cooling Principles
- Types of Desert Coolers
- Sizing and Installation Considerations
- Energy Efficiency and Maintenance

ESP Calculation
- Definition and Importance of External Static Pressure (ESP)
- ESP Calculation Methods
- ESP Adjustment and Optimization
- Impact on HVAC System Performance

Cold Storage
- Cold Storage Facility Types (Refrigerated Warehouses, Cold Rooms, etc.)
- Refrigeration System Design Considerations
- Insulation and Temperature Control Methods
- Safety and Compliance Standards

BOQ (Bill of Quantities)
- Definition and Purpose of BOQ
- Components of a BOQ in HVAC Projects
- BOQ Preparation Process
- Importance of Accurate BOQ in Project Management

Click here to chat with us

HVAC Drafting Syllabus

Preparation of Concept Design Drawing
- Initial Design Concept Development
- Sketching and Drafting Concepts
- Incorporating Client Requirements
- Preliminary Equipment Layouts

- Preparation of Detail Shop Drawing for AC and Ventilation Ducts
- Detailed Ductwork Layouts
- Sizing and Placement of Ducts
- Coordination with Other Trades (Electrical, Plumbing, etc.)
- Material Specifications and Installation Details

Chilled Water Pipes
- Chilled Water System Layout
- Pipe Sizing and Material Selection
- Pipe Routing and Support Details
- Insulation Requirements

Duct Fittings
- Types of Duct Fittings (Elbows, Transitions, Reducers, etc.)
- Selection Criteria for Duct Fittings
- Installation Guidelines
- Sealing and Leakage Prevention

Representation of Duct Pipe Levels, Slope, Flow Direction
- Level and Slope Requirements for Ductwork
- Conveying Flow Direction in Drawings
- Coordination with Building Structure
- Clear Communication of Design Intent

BOD's, BOP's
- Definitions of BOD (Basis of Design) and BOP (Basis of Payment)
- Documenting Design Assumptions and Criteria
- Establishing Design Parameters and Standards
- Aligning Design Intent with Client Expectations

Typical Detail of Chillers
- Chiller Equipment Specifications
- Chiller Location and Layout
- Connection Details (Piping, Electrical, etc.)
- Access and Maintenance Requirements

Typical Detail of AHUs (Air Handling Units)
- AHU Component Details (Fans, Coils, Filters, etc.)
- AHU Sizing and Selection Criteria
- AHU Location and Installation Requirements
- Airflow Direction and Distribution Details

Typical Detail of FCUs (Fan Coil Units)
- FCU Configuration and Components
- FCU Sizing and Selection Guidelines
- FCU Installation Details
- Control and Operation Features

Typical Detail of Pumps
- Pump Types and Specifications
- Pump Location and Installation Requirements
- Piping Connection Details
- Pump Control and Monitoring Features

Typical Detail of Valves
- Valve Types (Control Valves, Shut-off Valves, etc.)
- Valve Selection Criteria
- Valve Installation and Operation Details
- Control and Regulation Features

Typical Detail of Strainers
- Strainer Types and Applications
- Strainer Sizing and Selection Guidelines
- Strainer Installation Details
- Maintenance and Cleaning Procedures

Representation of Section Drawings
- Purpose and Importance of Section Drawings
- Cross-Sectional Views of HVAC Components
- Clear Annotation and Labeling
- Compliance with Drawing Standards and Codes

Click here to chat with us

Plumbing Design Syllabus

Introduction to Plumbing System
- Definition and Scope
- Historical Development
- Definition and Scope of Plumbing

Plumbing Standards
- International Codes
- Local Regulations
- Role of Standards Organizations

Common Plumbing Fixtures
- Types and Functions
- Installation Considerations
- Types of Sanitary Fixtures

Flow through Pipes
- Fluid Dynamics Basics
- Factors Affecting Flow
- Factors Influencing Flow Rate

Drainage System
- Components and Functions
- Gravity vs. Pressure Systems
- Components of a Drainage System

Cold Water System
- Supply Source
- Distribution Network Design
- Sources of Potable Water Supply

Hot Water System
- Hot water requirement
- Local & Central hot water system
- Types of hot water recirculation system
- Hot water demand calculation

Design of Soak away pit
- Introduction to soak away pit
- Advantages & Disadvantages of soak away pit
- Soak away pit sizing calculation

Design of Dispersion Trenches
- Introduction to dispersion trench
- Dispersion trenches sizing calculation

Design of Sewer Drain Line
- Design Criteria of sewer drain line
- Sewer drain line calculation

Design of Storm water system
- Introduction to storm water
- Advantages & Disadvantages of storm water
- Design Criteria of storm water system

Design of Rain gutter
- Introduction to rain gutter
- Types of gutter & it's advantages
- Design Criteria of rain gutters

Rainwater Harvesting System
- Introduction to rainwater harvesting
- Advantages & Disadvantages & Uses
- Basic Components
- Rainwater harvesting technique

Design of Fountain System
- Introduction to fountain system
- Types & it's advantages
- Design Criteria of fountain system

Water Demand Calculation
- Domestic water demand calculation
- Flush water demand calculation
- STP Capacity calculation

Tank/Reservoir Sizing
- Determining Water Storage Needs
- Sizing Methods and Considerations
- Sources of Potable Water Supply

Pipe Sizing
- Hydraulic Calculations
- Selection Criteria
- Hydraulic Principles for Pipe Sizing

Gray Water System
- Recycling and Reuse
- Treatment Technologies
- Definition and Purpose of Gray Water Recycling

Design of Septic Tank
- Septic Tank Design Principles
- Drain Field Design
- Material Selection for Septic Tanks

Inspection Chambers
- Function and Placement
- Maintenance Considerations
- Maintenance Procedures

Plumbing Drafting Syllabus

Concepts of Design Drawing
- Basic principles of design drawing.
- Importance of accuracy and clarity.
- Communication through drawings.

Creating Shop Drawings
- Detailed representations for construction.
- Collaboration with contractors.
- Compliance with project specifications.

Location Maps
- Overview of project sites.
- Identification of key features.
- Scale and symbols for clarity.

Site Plans
- Layout of buildings and infrastructure.
- Zoning considerations.
- Integration of utilities and landscaping.

Working on Floor Plans
- Interior space layout.
- Representation of walls, doors, and windows.
- Dimensioning for accuracy.

Working on Elevations and Cross Sections
- Vertical building façade depiction.
- Structural and architectural details.
- Visualization of building elements.

Reinforcement Detailing
- Structural element reinforcement.
- Compliance with design specifications.
- Bar schedules and bending details.

Preparing Detailed Plumbing Drawings
- Layout of plumbing systems.
- Fixture locations and connections.
- Compliance with plumbing codes.

Isometric Drawings
- Three-dimensional representation.
- Use of isometric projection.
- Visualization of complex objects.

Riser Diagram
- Vertical distribution of utilities.
- Identification of risers.
- System components and connections.

Click here to chat with us

Fire Fighting Design Syllabus

Introduction to Fire System
- Overview of fire protection systems.
- Importance in building safety.
- Basic principles and components.

Classification of Fire
- Different classes based on fuel type.
- Fire behavior and extinguishing methods.
- Identification and response strategies.

Fire Extinguishers
- Types and usage for different fire classes.
- Selection, installation, and maintenance.
- Training in proper handling and operation.

Hazard Classification
- Identification of fire hazards.
- Risk assessment and mitigation strategies.
- Compliance with safety regulations.

Active and Passive Fire Protection System
- Distinction between active and passive measures.
- Examples and applications.
- Integration for comprehensive protection.

Fire Water Sump Sizing
- Calculation of sump capacity.
- Design considerations and location.
- Compliance with standards and regulations.

Overhead Tank Sizing
- Determination of tank capacity.
- Factors influencing sizing.
- Installation and maintenance guidelines.

Sprinklers
- Types and applications.
- Design principles and layout.
- Compliance with NFPA 13.

Dry Riser, Wet Riser, Down Comer Selection
- Selection criteria and applications.
- Design considerations and installation.
- Compliance with standards and codes.

Fire Standpipe System
- Purpose and components.
- Design and installation requirements.
- Compliance with NFPA 14.

Reference Standards
- Overview of key standards and codes.
- Applicability and compliance.
- Importance in fire system design.

Fire Hose Cabinets
- Design and installation guidelines.
- Equipment selection and storage.
- Accessibility and maintenance.

Fire Hydrants Selection
- Criteria for selection and placement.
- Types and features.
- Compliance with NFPA 24.

Hydraulic Calculations
- Calculation methods for water flow and pressure.
- Pipe sizing and layout considerations.
- Software tools for hydraulic analysis.

Pump Head Calculation & Selection for High-Rise Buildings
- Determination of pump head requirements.
- Pump selection and sizing criteria.
- Considerations for high-rise buildings.

Zone Control Valve
- Purpose and function.
- Selection and installation.
- Integration with fire protection systems.

Elite Software
- Overview of software features.
- Applications in fire system design.
- Training and support resources.

Fire Water Pumps
- Types and characteristics.
- Selection criteria and sizing.
- Installation and maintenance guidelines.

Diesel Tank Capacity Calculations
- Calculation methods for tank capacity.
- Compliance with NFPA 20.
- Considerations for standby generators.

Fire Alarm System Design
- Design principles and components.
- Integration with fire protection systems.
- Compliance with NFPA standards.

Click here to chat with us

Fire Fighting Drafting Syllabus

Concepts of Design Drawing
- Fundamentals of design drawing.
- Importance of accuracy and clarity.
- Communication of design intent.

Creating Shop Drawings
- Detailed representations for construction.
- Collaboration with contractors and suppliers.
- Compliance with project specifications.

Location Maps
- Overview of project sites.
- Identification of key features.
- Scale and symbols for clarity.

Site Plans
- Layout of buildings and infrastructure.
- Incorporation of site features.
- Zoning considerations.

Working on Floor Plans
- Interior space layout.
- Representation of architectural elements.
- Dimensioning for accuracy.

Working on Elevations and Cross Sections
- Vertical and horizontal views of buildings.
- Depiction of structural and architectural details.
- Visualization of building elements.

Reinforcement Detailing
- Detailing of structural reinforcement.
- Compliance with design specifications.
- Bar schedules and bending details.

Preparing Detailed Fire Fighting System Drawings
- Layout of fire protection systems.
- Representation of system components.
- Compliance with fire safety standards.

Isometric Drawings
- Three-dimensional representation.
- Use of isometric projection.
- Visualization of complex objects.

Riser Diagram
- Vertical distribution of utilities.
- Identification of riser locations.
- System components and connections.

Electrical Design Syllabus

Introduction to Electrical Services
- Overview of building electrical systems.
- Functions and components.
- Importance in construction.

Building Services
- Projects requirement
- Types of False Ceiling
- Representation of Room
- Classification of Buildings
- Electrical Standards
- Lighting & Power Circuits

Exhaust Fans Selection
- Types and functions.
- Selection criteria.
- Installation and maintenance.

Ceiling Fans Selection
- Types and functions.
- Selection criteria.
- Installation and maintenance.

Lighting Design
- Lighting Calculation Manually
- Lighting Calculation by CG Lux Software
- Lighting Calculation by DIALux Software

Illumination
- Internal Lights types and functions.
- External Light types and functions.

Power Outlets & Switches
- Types and functions.
- Selection criteria.

Electrical Load calculation
- Load Scheduling
- Load Types and Characteristics
- Load Estimation Methods
- Load Scheduling
- Code Compliance and Standards

- Cables Selection
- Types and functions.
- Selection criteria.
- Sizing and calculations.

Conduit Sizing for Cables
- Types and functions.
- Selection criteria.
- Sizing and calculations.

Cable Trunking Selection
- Types and functions.
- Selection criteria.
- Sizing and calculations.

Cable Tray Selection
- Types and functions.
- Selection criteria.
- Sizing and calculations.

Capacitor Bank
- Power factor correction.
- Types and configurations.
- Sizing and installation.

Generator
- Backup power importance.
- Types and fuel sources.
- Installation and maintenance.

Single Line Diagrams
- Design representation.
- Symbols and conventions.
- Creation and interpretation.

Earthing
- Safety importance.
- Types and systems.
- Design and installation.

Lightning Arresters
- Lightning protection.
- Types and installation.
- Grounding requirements.

Solar Panels
- Renewable energy source.
- Types and configurations.
- Installation and maintenance.

UPS Selection
- Backup power necessity.
- Types and features.
- Sizing and selection.

Low Current System
- Data, security, communication.
- Components and applications.
- Integration and compatibility.

Electrical Drafting Syllabus

Concepts of Design Drawing
- Basic principles.
- Communication.
- Accuracy and clarity.

Creating Shop Drawings
- Detailed representations.
- Collaboration.
- Compliance.

Location Maps
- Site overview.
- Key features.
- Scale and symbols.

Site Plans
- Building layout.
- Zoning.
- Utility integration.

Working on Floor Plans
- Interior layout.
- Wall, door, window representation.
- Dimensioning.

Working on Elevations and Cross-sections
- Vertical and horizontal views.
- Structural and architectural details.
- Visualization.

Reinforcement Detailing
- Structural reinforcement.
- Specification compliance.
- Bar schedules.

Preparing Detailed Electrical Drawings
- Electrical system layout.
- Component representation.
- Code compliance.

Isometric Drawings
- 3D representation.
- Isometric projection.
- Visualization.

Riser Diagram
- Vertical electrical distribution.
- Identification and labeling.
- Component connections.

Get Certified with
Globally Recognized Credentials

Your Gateway to International Opportunities

On successful completion of the program, you'll receive 2 industry-recognized certificates — one from Autodesk and another from Augmintech, which is accredited by ISO, EGAC, and IAF

Click here to chat with us

Your Career Support

100% Internship Assistance

Once the course is completed in 6 months, you will be assisted for an internship opportunity in reputed companies where you will be working in actual projects for a comprehensive exposure

100% Job Assistance

It is mandatory to attend all the pre-recorded and live sessions, take up all the quizzes, attend career development sessions, etc. After successful completion, we will assist you in appearing in interviews for companies located in India, UAE, KSA, or other Gulf countries.

Our Learners' voices

ADNAN FERATOVIC

FACILITIES MANAGER, NEW YORK

Yeshiva University

Great program for people that would like to learn. Great graphics, well explained and easy to follow directions. I would suggest this course to anyone, and the prices are good. Overall, 5 starts for sure.

EMRE CAN ERDAT

CONSTRUCTION ENGINEER, TURKEY

Schlumberger

"The course started from very basic to what we use in everyday life to extend that we can use in understanding construction and design. The course was very well crafted. Thank you Augmintech.

NICK J FERNANDEZ

DIRECTOR OF ENGINEERING

RB Sanchez Consultants & Associates, Inc.

Augmintech including its materials are great and useful for both beginners and refreshers. The materials are easy to understand and discussed in a well manner pace. References are well pointed and the mode itself is excellent. I would recommend their lessons both paid and free as it will give you a great background and details on its specific subject matter

JAY AGUELO

MANAGER, UAE

Farah Experiences LLC

"I encourage you to take any trainings from Augmintech. They are really good. They are the best. If you are looking for any trainings for job opportunities, for career growth, this is the best training school.

Click here to chat with us

Our Learners' voices

SALMAN HASAN

ARCHITECT, UAE

Sim Leisure Gulf Contracting

"The courses offered by Augmintech are amazing and highly relevant to what is required in the industry. The detailed explanations were amazing for every topic, and I sincerely thank Augmintech for making my professional life so easy.

AMJAD AHMED NAJI

MECHANICAL DESIGN ENGINEER, KSA

WSP

"I was able to get a very good job in because of Augmintech. The knowledge I had from the course is outstanding really. I am a designer now and I am doing so good. What you are doing is definitely unique and adds alooot to everyone in the world..

TUMISHO RAMOSHABA

BIM MODELER, RSA

Geberit Southern Africa

"Deciding to enrol for this course was the best thing ever. Thank you Augmintech.

ABDUL RAZZAK

MECHANICAL ENGINEER, KSA

Engineering Specialties Est.

"I have more than 11 years of experience in MEP. Recently, I enrolled in Augmintech course related to designing. It was a nice and refreshing experience for me to learn lots of concepts which I am not aware of. The course is beautifully designed, and delivery was ex

Excellent

Meraj Ahmad — SA • 1 review — Apr 26, 2024
Greetings,
Greetings,
Good topic and very good style 👌 of explained by teacher.I like Augmintech instute for professional courses.
Thank you.
Meraj Ahmad.

Md Sarowar Kabir — BD • 7 reviews — Sep 8, 2023
Really worthy session
Really worthy session, deeply explained heat load calculation in Revit & concept of BIM

Navinprabu P V — IN • 2 reviews — Jul 30, 2023
The way of teaching is really awesome...
The way of teaching is really awesome and doubt clearing is my favourite. Eventhough i am not able to delivery my query in proper way .But the tutor tries to understand my requirement and giving me valuable answer.I am very grateful to be part of these course.

Ravindra Kumar — AO • 1 review — Aug 27, 2023
The very clear and informative training...
The very clear and informative training I got

shifin e — AE • 1 review — Apr 16, 2023
very informative session
very informative session. Detailed explanation was provided

abhishek rokade — IN • 1 review — Mar 17, 2023
The teaching staff is experienced and...
The teaching staff is experienced and they teach each and every small things by conseptully

Mukul Bhardwaj — IN • 1 review — Aug 4, 2023
It was a mind blowing session of...
It was a mind blowing session of knowledge. Teaching methodology is so nice that I got a lot of valuable facts about the topic in very short period of time. Completely Awesome.

Usman Sami — PK • 2 reviews — May 5, 2023
Clear instructions and guidance provide...
Clear instructions and guidance provide on software controlling which helped alot to me

Daniel — AE • 1 review — May 6, 2023
Great Company
The company teaches well. The teacher is well knowledgeable and good at teaching. The subject are for beginners and professionals. Overall must try the courses.

Lagman, Lance Andrew N. — PH • 1 review — May 3, 2024
The calculation using revit are well...
The calculation using revit are well explained

Zubair Khan — SA • 3 reviews — Apr 19, 2024
I gained valuable knowledge that I can...
I gained valuable knowledge that I can apply in our projects. The teaching style facilitated a deeper understanding of the subject matter, making the learning experience both enjoyable and enriching.

Manoj Singh — IN • 1 review — Sep 8, 2023
Great Teaching Skills...
The way of explaining it is really great. I never saw any instructor explain this deeply... each and every point was practical and nicely presented... Thank you so much, sir...

raja cadd — IN • 1 review — May 3, 2024
Fabulous Webinar
Its a great experience to learn duct design webinar. the instructor given more info for the HVAC. I can understand each and everything and related to my career.The Instructor given a crystal clear explanation about the topic.
All the best for the team Augmintech.

Kalimullah Abdul Rauf — OM • 2 reviews — Jun 23, 2023
Great experience
Great experience. Instructor teaching good,clear, informative and understandable

Eleazar Zulu — ZM • 1 review — May 2, 2023 — Verified
My personal experience
Very informative and nicely delivered making it easy to follow,understand and put to use.

Augustine — ZA • 1 review — Mar 23, 2023 — Verified
The Learning sites are easy to use and...
The Learning sites are easy to use and user friendly.

Isaac — MX • 2 reviews — May 5, 2023
The course is excellent
The course is excellent, the instructor class is too clear, you can have the knowledge to use the software

Shawn Fisher — BW • 1 review — Apr 27, 2024
Webinars and Courses
Their lectures, presentation and amount of information is excellent.

Aniket Nankar — IN • 1 review — Sep 8, 2023
BIM Revit MEP calculation
Hello,
I am going through Heat load calculation live session and its really helpful and important to know how HEL is carried out in Revit software. Instructor is having details knowledge about topic (Heat load calculation in revit)

Thanks and looking forward for more such live training sessions

Sagar Patil — IN • 1 review — Mar 17, 2023
great course
great course. I plan on continuing lessons after a short break. I can't believe how much I learned in a short amount of time.

Bilal Ahmad — AF • 2 reviews — May 5, 2023
The explanation is really clear and...
The explanation is really clear and everything the professor says is coherent to the subject

Mohamed Ismail Masthan — IN • 1 review — May 3, 2024
Useful of the class
Useful of the class. Good teaching and detail explanation.

mohammad mohsin — AE • 1 review — Mar 9, 2023
This one of the best platform i have...
This one of the best platform i have come across.
They way things are explained is great.
